

## **EAACI Allergy School Specific Allergy and Immunotherapy**

***Dear Colleagues,***

The **EAACI/GA2LEN** Allergy School on Specific Allergy and Immunotherapy will give the attendees an update on allergic diseases and allergens, specific diagnosis of allergy and allergic diseases, basic immunology of allergy and mechanisms of specific immunotherapy, clinical evidence and practical issues on practical immunotherapy, new targets in immunotherapy, and more.

You can see the Programme [here](#).

After attending this summer school participants will be able to bring back to their daily clinical work and research activities new knowledge about the importance of allergy and its underlying immunological conditions, focusing on the etiology, symptoms and management of allergic diseases, and to implement new concepts on allergy specific immunotherapy.

**Registration is open until 1 October 2012** or until the expected number of registrations is reached. In order to achieve an intimate and collegial atmosphere, to leave plenty of space for discussion and to obtain optimum conditions for practical sessions, the number of participants will be limited to 60.

This School will **take place in El Escorial, Spain**. Right in the heart of the Sierra of Guadarrama and only 50 km from Madrid, this lively city opens itself to the world offering the visitor an exclusive architectonic heritage, a privileged natural environment and an unbeatable cultural proposal in the Madrid region.

**Abstract submission** will be open from 20 August until 20 September. Submission of abstracts is not obligatory but encouraged. Only abstracts in the field of allergy and immunotherapy will be considered. Both scientific work and case presentations are welcome.

The EAACI/GA2LEN Allergy School on Specific Allergy and Immunotherapy will be CME accredited and a limited number of travel grants will be provided.

Here you can find more information about this school.

We are looking forward to seeing you in El Escorial!
